PROTOTYPE · TO TRY ON TRACK

PITBOOK

Your trackday logbook.

WHAT IS IT?

An app for track riders. It keeps all your trackdays and lap times, tracks your progress circuit by circuit and lets you compare with your friends. On the day, it shows your group and your schedule in big type. It doesn't replace the organiser or the official timing: it keeps a record of what you ride.

WHAT'S INSIDE

- **Your lap times**, typed in or read from a photo of your timesheet.
- **Your records per circuit**, your progress chart and your season.
- **The friends' podium** on every circuit.
- **Race day**: your group, your schedule, your checklist.
- **Stories to share** with the circuit outline.

INSTALL IN 1 MINUTE

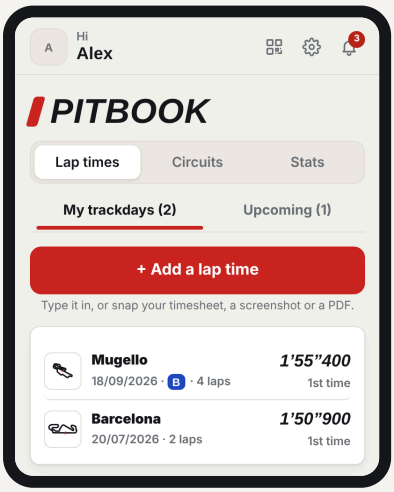

Open this link on your phone:

```
thereiivman-art.github.io/carnetpiste
```

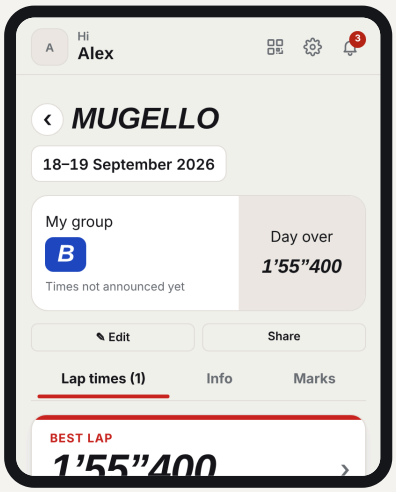

- **iPhone**: in Safari, tap Share, then “Add to Home Screen”.
- **Android**: in Chrome, menu ⋮, then “Install app”.
- Create your account with your email and a password.
- **Language**: English or French, in Settings › General.

THREE TABS

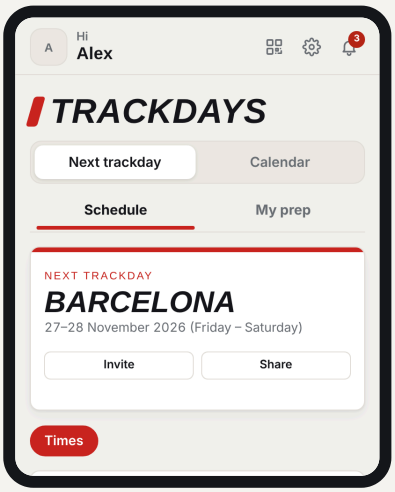

Pitbook · **Trackdays** · **Community**

Pitbook: your lap times

A trackday: group, best lap, between friends

Trackdays: the next one and its schedule

YOUR TEST

BARCELONA · 26–27 NOVEMBER

1

Before you leave

Install the app, create your account and keep it open for a minute with a signal: it gets ready to work offline afterwards. In *Trackdays*, find the Barcelona day or add it with “Add a trackday”. In *Community*, add me as a friend so we can compare lap times.

2

In the morning

Open the app: the race-day screen shows your group and your schedule in big type. If the schedule is missing, snap the paddock board with “Import the times (photo or PDF)”.

3

After your sessions

Tap “Import my timesheet” and take a photo of the timesheet, a screenshot or the PDF. The app reads your laps, keeps your best time and compares it with your friends'. You can also type a lap time in.

4

In the evening

Check your Barcelona record and the friends' podium, then share your day's story if you like.

GOOD TO KNOW

- It's a **prototype**: there may be bugs, and finding them is the point.
- It works **in airplane mode**: your lap times stay on the phone and are sent when you have a signal again.
- The app's lap times are **unofficial**. The organiser's timing remains the reference.
- The timesheet is read on your phone. Check the times before you confirm.
- The app is free during the test.

YOUR FEEDBACK MATTERS

What helped, what annoyed you, what's missing: tell me directly, even in a rush. A screenshot of what doesn't work helps a lot.
